(54) Title: **RADIANCE LIGHTING SYSTEM AND METHOD**

(57) **Abstract:** A lighting system includes a wiring system and a plurality of light source modules adapted for connection to and disconnection from the wiring system. Each light source module includes at least one light source unit including a plurality of light emitting diodes, wherein each of the light emitting diodes is independently connected with the wiring system. The lighting system of the invention may be modular, allowing use of a suitable number and arrangement of light source modules for illuminating a given space or surface. The lighting system may be adapted for being mounted, e.g., to structures such as walls, ceilings, and the like, via a mounting assembly. The lighting system may be suitable for, but not limited to, shedding visible light directly or indirectly to a space or a surface.
